

LIFTING IN KITCHENS AND BAKERIES

LiftSafe
LTD.
Specialist Materials Handling Solutions

► LSH E

Mixer bowls can be heavy and difficult to move around. An LSH E Kitchen Lifter lifts and shifts heavy items around in the kitchen and the bakery. It is easy to use, takes the weight off your daily workload and allows you to work in a smarter manner while at the same time taking care of your body.

LSH E is available in three versions; K1 and K2 lift items to the table edge, K can place the bowl right on the table top.

All our lifters come with electrically operated lifting/lowering functions and rechargeable batteries.

► LSH 70

Kitchens and bakeries use large quantities of goods that need to be lifted and moved around. Instead of manual lifting and shifting operations, use an ergonomic lifter as an aid in the daily routines to prevent sore back and limbs.

The LSH 70 lifter is electrically operated and provided with a platform that allows you to lift and carry cardboard and plastic boxes, pans, sacks, bowls, roasting dishes etc.

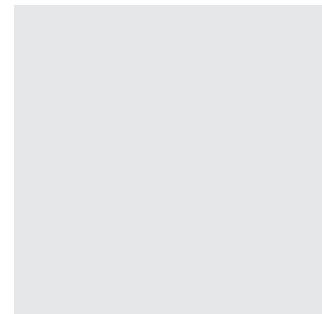

The LSH 70 is available in two heights.

► LSH 80 QC

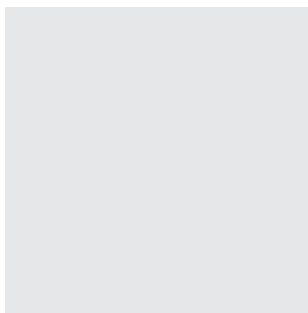

Mixer bowls in many sizes need to be lifted and shifted as well as tipped and emptied several times every day. LSH 80 QC grabs hold of bowls between 30 and 80 litres and lifts, rotates, tips and empties them. You can lift the bowls and pour the contents out on to the table top or position the bowl at the right working position when you need to portion out the contents.

You can free yourself of all lifting operations and no longer have to carry the bowls around. LSH 80 QC comes in stainless steel, with smooth surfaces for easy flushing to clean it.

LSH 80 QC is available in two heights.

► LSH 100 CLICK AND 140 CLICK

A 100 litres mixer bowl easily weighs in excess of 100 kg, when loaded, and is almost impossible to lift and shift around. An INOX lifter enables you to easily get hold of the bowl and lift it, shift it around, position it at a suitable height, rotate the bowl and pour the contents into a pan or the dough onto the table.

You can also leave the bowl at the lifter and rotate it for easy cleaning inside and out and to wipe it dry.

Bowls easily 'snap lock' to the lifting arms and are held securely in place during lifting and rotary operations.

The lifter comes in stainless steel, with smooth surfaces for easy flushing to clean it. INOX 100 is the ideal choice for 100 litres bowls and INOX 140 for 140 litres bowls.

Both models are available in two heights.

When mixer bowls become large they can be practically impossible to lift and shift around. For these operations you need an LSH 200I lifter which enables you to safely and easily lift, fill, shift around, empty and wash even large mixer bowls, from 140 up to 200 litres.

All LSH lifters are provided with a remote control which allows you to lift and empty the bowl while standing next to the lifter.

LSH 200I is available in two heights.
